This invention describes a novel composition containing (apart from a carrier or excipient), a novel PRO245 polypeptide (I) its agonist or antagonist, or their fragments, for medulating: (i) infiltration of inflammatory cells into tissue; (ii) an immune response, or (iii) T cell informatory cells into tissue; (ii) and immune response, or (iii) T cell products of the citypention increases on decreases any of the effects (i)-(iii). The products of the citypention increases on decreases and their tragments, are used to treat immune-related diseases, particularly continued and include systemic lands of the cells of the composition increases of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cells of the cel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition containing novel polypeptide PRO245, its agonist or
                                                                                                                                                                                                                                                                                                                                                                                 Gurney AL, Tumas D, Wood WI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              30-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           15-SEP-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        05-OCT-1
      AAY13344-403 represent secreted and transmembrane human proteins. The CDNA sequences are obtained from CDNA libraries, prepared from fetal cund, sequences are obtained from CDNA libraries, prepared from fetal conded polypeptides have specific uses based on their homology to known polypeptides, e.g. PRO211 and PRO217 can be used for disorders associated with the preservation and maintenance of gastrointestinal mucosa and the repair of acute and chronic mucosal lesions (e.g. enterocollis, collinger-Ellison syndrome, gastrointestinal ulceration and congenical microvillus atrophy), skin diseases associated with abnormal keratinocyte differentiation (e.g. psoriasis, epithelial cancers such as lung squamous cell carcinoma of the vulva and gliomas) potent effects on cell growth and development, diseases related to growth or survival of nerve cells and development, diseases, Alzheimer's disease, ALS, neuropathies or cancer. PRO265 can be used as a target for anti-tumor drugs. PRO533 may be used as an anti-thrombotic agent; PRO287 polypeptides and portions may chave therapeutic applications in wound healing and tissue repair; PRO317 can be used for treating problems of the kidney, uterus, endometrium, blood vessels, or related tissue, e.g. in the heart of genital tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

The present invention describes sixty four human PRO proteins which can be used in the treatment of immune related diseases. The human PRO proteins, anti-PRO antibodies, agonists and antagonists are useful for treating and diagnosing immune related disorders. The disorders are useful for treating and diagnosing immune related disorders. The disorders are osteoarthritis, juvenile chronic arthritis, spondyloarthropathies, spondyloarthropathies, syndrome, systemic vasculitis, arthritis, systemic vasculitis, arthritis, sprodyloarthropathies, Sjogran's syndrome, systemic vasculitis, arthritis, autoimmune haemolytic immune mediated renal disease, demyelinating diseases of the central and peripheral nervous systems, hepatobiliary diseases, inflammatory bowel disease, gluten-sensitive enteropathy and Whipple's disease, autoimmune cor immune-mediated skin diseases, allergic disease, immunological diseases of the lung, and transplantation associated diseases including graft rejection and graft-versus-host-disease. AACS8579 to AACS8578 represent PCR primers and hybridisation probes used in the isolation of thuman PRO sequences AACS8579 to AACS842 and AABB3414 to AABB3477 exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 312 AA;

```
The present sequence is the human protein PRO245, encoded by UNQ219 cDNA, designated as clone DNA3658. It is isolated from human foetal liver tissue. It has structural homology to transmembrane protein receptor tissue. It has structural homology to transmembrane protein receptor tyrosine kinase family and has 60% amino acid identity with human c-myb protein. It enhances or suppresses the infiltration of infilammatory cells into tissues, proliferation of T-lymphocytes and modulates the immune response. This sequence is useful for treatment of immune related disorders, like SLE, rheumatorid/juvenile arthritis, spondyloarthropathy, as dermatomyositis, slogren's syndrome, systemic vasculitis, sarcoidosis, as dermatomyositis, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autorimune hemenlitus, immune—mediated renal disease e.g. Grave's disease, diabetes mellitus, immune—mediated renal disease such as multiple sclerosis and primary biliary cirrhosis, inflammatory and fibrotic lung diseases such as inflammatory bowel disease (e.g. Crohn's disease), autoimnume or immune—mediated skin diseases such as psoriaasis, allegies like asthma, immune—mediated skin diseases such as sporiaasis, allegies like asthma, immune—mediated skin diseases such as sporiaasis, allegies like asthma, immune—munolagical diseases of the lungs such as sosinophilic pneumonia and temporation associated diseases such as goraft-versus-host-disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Composition for treatment and diagnosis of immune related diseases e.g. Grave's disease comprises a PRO245, PRO217, PRO301, PRO266, PRO335, PRO331 or PRO326 polypeptide or its agonists or antagonists (preferably

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful for preventing, diagnosing and treating diagnosing a cardiovascular, endotherlial or angiogenic disorder in mammals by modulating cell proliferation, angiogenesis and cardiovascularisation, and for identifying agonists and antagonists of these processes. The mucleic acids and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate PRIO expression such as cardiovascular, endothelial or angiogenic disorders in emmalls (e.g. atheroscienosis, cancers and cardiac hypertrophy). For example, the nucleic acids (NCS) and vectors containing them and the PRO polypeptide may be used to treat disorders associated with decreased PRO

Sixty one nucleic acids encoding PRO polypeptides which are useful in the

WPI; 2001-081051/09.

N-PSDB; AAF72383

```
The present sequence is one of sixty one novel secreted and transmembrane PRO polypeptides are useful for treating skin diseases (e.g. psoriasis), cancers (e.g. lung squamous cell cardinoma), gastrointestinal disorders (e.g. enterocolitis), neurodegenerative diseases (e.g. Alzheimer's disease, Parkinson's disease), wound repair, cardiovascular disorders (e.g. endometrial bleeding angiogenesis, ischaemias such as coronary ischaemia, atheroscierosis), inflammatory disorders (e.g. asthma, rheumatoid arthritis, multiple sclerosis) inflammatory pigmentosum. The PRO nucleic acids have applications in molecular biology, including use as hybridization probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     82

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                             388

phage polarity suppression protein [imported] - Salmonella enterica subsp. enterica seron C, Species: Salmonella enterica subsp. enterica serovar Typhi
A,Note: this species has also been called Salmonella typhi
C,Date: 09-Nov-2001 #sequence_revision 09-Nov-2001 #text_change 18-Nov-2002
C,Accession: AF1062

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                음
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           엄
N;Alternate names: DNA topoisomerase II
C;Species: Rattus norvegicus (Norway rat)
C;Date: 03-Feb-1994 #sequence_revision 03-Feb-1994 #text_change 16-Jul-1999
C;Accession: JN0598; S32012
C;Accession: JN0598; S32012
B;Dochem: Biophys. Res. Commun. 193, 787-793, 1993
A;Title: Nucleotide sequence analysis of the cDNA for rat DNA topoisomerase II.
B;Acterence number: JN0598; MUID:93290677; PMID:8390253
A;Ritle: Nucleotide sequence analysis of the cDNA for rat DNA topoisomerase II.
A;Reference number: JN0598; MUID:93290677; PMID:8390253
A;Reterence number: JN0598
A;Status: nucleic acid sequence not shown
A;Reterence number: JN0598
A;Status: nucleic acid sequence not shown
A;Reterences: EMBL:119552; NID:957963; PIDN:CAA79611.1; PID:957964
A;Reterences: EMBL:12952; NID:957963; PIDN:CAA79611.1; PID:957964
A;Experimental source: testis
A;Gene: the authors translated the codon GTG for residue 3 as Leu
C;Comment: This enzyme is required for the segregation of circular DNA molecules after x
C;Genetics:
A;Gene: rTOp2
C;Superfamily: eukaryotic type II DNA topoisomerase; phage T4 DNA topoisomerase
C;Comment: This pub arecombination; DNA repair; DNA replication, isomerase
C;Comment: This phage T4 DNA topoisomerase (ATP-hydrolyzing) medium chain homology cT4
C;Seywords: ATP; DNA recombination; DNA repair; DNA replication; isomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S,

Illagellar functional protein - Helicobacter pylori (strain J99)
C.Species: Helicobacter pylori
A.Variety: strain J99
G.Species: Helicobacter pylori
A.Variety: strain J99
C.Accession: H7839
C.Accession: H7839
B.Alm, R.A.; Ling, L.S.L.; Moir, D.T.; King, B.L.; Brown, E.D.; Doig, P.C.; Smith, D.R.; I.Yos, C.; Gibson, R.; Merberg, D.; Mills, S.D.; Jiang, Q.; Taylor, D.E.; Vovis, G.F.; J. Nature 397, 176-180, 1999
A.Title: Genomic sequence comparison of two unrelated isolates of the human gastric path A, Reference number: A71800; MUID: 99120557; PMID: 9923682
A, Accession: H71839
A, Status: preliminary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             82
-!- FUNCTION: MAY PLAY A ROLE IN THE PROCESSES OF LYMPHOCYTE HOMING TO SECONDARY LYMPHOLD ORGANS.
-!- SUBCELLULAR LOCATION: Type I membrane protein (Potential).
-!- TISSUE SPECIFICITY: PROMINENTLY EXPRESSED ON HIGH ENDOTHELIAL VENULES BUT IS ALSO PRESENT ON THE ENDOTHELIA OF OTHER VESSELS.
LOCALIZED TO THE INTERCELLULAR BOUNDARIES OF HIGH ENDOTHELIAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 YHKAYGFSAPKDQQVVTAVXYQEAILACKTPKKTVXSRLEWKKLGRSVSFVYYQQTLQGD

Submitted (AUG-1998) to the EMBL/GenBank/DDBJ databases.

-!- CATALYTIC ACTIVITY: ATP + L-glutamque + tRNA(Glu) = AMP + diphosphate + L-glutamql-tRNA(Glu).

-!- SUBUNIT: Monomer (By similarity).

-!- SUBCELLUIAR LOCATION: Cytoplasmic.

-!- SIMILARITY: Belongs to class-I aminoacyl-tRNA synthetase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7; Gaps

C. --- FUNCTION: The ruyA-ruyB complex in the presence of ATP renatures

CC indicating that it may promote strand exchange reactions in

CC indicating that it may promote strand exchange reactions in

CC indicating that it may promote strand exchange reactions and

CC reanneling (By similarity).

CC --- SUBUNIT: Forms a complex with ruyA (By similarity).

CC --- SIMILARITY: Belongs to the ruyB family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright. C cluciform structure in supercoiled DNA with palindromic sequence, indicating that it may promoce strand exchange reactions in homologous recombination. RuvAB is an helicase that mediates the reanneling (By similarity).

C -i- SUBUNIT: Forms a complex with ruvA (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. Biophys. Res. Commun. 193:787-793 (1993).

-i- FUNCTION: Control of topological states of DNA by transient
breakage and subsequent rejoining of DNA strands. Topoisomerase II
makes double-strand breaks.

-i- CATALYTIC ACTIVITY: APP-dependent breakage, passage and rejoining
of double-stranded DNA.

-!- SUBCELLURAR LOCATION: Nuclear.
-!- MISCELLANBOUS: Eukaryotic topoisomerase I and II can relax both negative and positive supercoils, whereas prokaryotic enzymes relax only negative supercoils.
-!- SIMILARITY: Belongs to the type II topoisomerase family.

"Reductive genome evolution in Buchnera aphidicola.";

Proc. Natl. Acad. Sci. U.S.A. 100:581-586(2003).

"I. CATALVITC ACTIVITY: 2 ATP + L-glutamine + CO(2) + H(2)O = 2 ADP +

"I. CATALVITC ACTIVITY: 2 ATP + L-glutamine (By similarity).

"I. PATHWAY: Arginine biosynthesis; first step.

"I. PATHWAY: Pyrimidine biosynthesis; first step.

"I. SUBUNIT: Composed of two chains; the small (or glutamine) chain

promotes the hydrolysis of glutamine to ammonia, which is used by

the large (or ammonia) chain to synthesize carbamoyl phosphate (By

similarity).

"I. SIMILARITY: Belongs to the carB family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5 YGFSAPKDOOVVTAVXYQEALLACKTPKKTVXSRLEW------KKLGRSVSFVYY 53

-!- FUNCTION: The ruvA-ruvB complex in the presence of ATP renatures cruciform structure in supercoiled DNA with palindromic sequence, indicating that it may promote strand exchange reactions in homologous recombination. RuvAB is an halicase that mediates the Holliday junction migration by localized denaturation and reanneling (By similarity).
-!- SUBGNUT: Forms a complex with ruvA (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    4 AYGFSAPKD--QQVVTAVXYQEAILACKTPKKTVXSRLEWKKLG----RSVSFVYYQQTL

                                                                                                            DEVELOPMENTAL STACE: Isoforms 2-4 are detected at embryonic day 4 (ED4) in both visceral and somatic motor neurons of spinal cord and is highest at ED6. Isoform 1 is not expressed until ED 6 in spinal cord. At ED 11 both isoforms display comparable levels. DOMAIN: The cytoplasmic domain may be involved in the regulation of trafficking and proteolytic processing. Regulation of the proteolytic processing involves initial intracellular domain dimerization (By similarity).

DOMAIN: ERBB receptor binding is elicited entirely by the EGF-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (By

"Role of the ruvB gene in homologous and homeologous recombination in Rhizobium etli.";
Gene 243:125-131(2000).
-!- FUNCTION: The ruvA-ruvB complex in the presence of ATP renatures cruciform structure in supercoiled DNA with palindromic sequence, indicating that it may promote strand exchange reactions in homologous recombination. RuvAB is an helicase that mediates the Holliday junction migration by localized denaturation and reanneling (By similarity).
-!- SUBUNIT: Forms a complex with ruvA (By similarity).
-!- SIMILARITY: Belongs to the ruvB family.
                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Submitted (SEP-2001) to the EMBL/GenBank/DDBJ databases.
-!- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotein.
-!- CORACTOR: Magnesium (By similarity).
-!- SIMIMARITY: Belongs to the Ser/Thr family of protein kinases. MAP kinase subfamily.
                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Eukaryota, Metazoa, Nematoda, Chromadorea, Rhabditida, Rhabditoidea,

Mauser D.F.; Exlund M.W.; Boquet P., Popoff M.R.;
Nordanization of the botulinum neurotoxin C1 gene and its associated non-toxic protein genes in Clostridium botulinum C 468.";
Mol. Gen. Genet. 243:331-640(1994).
-!- SUBUNIT: HA IS COMPOSED OF SUBCOMPONENTS HAVING 53, 33, 22-23, AND 17 kDa. BOTULINUM TOXINS ARE PRODUCED AS PROGENITOR TOXINS OF LARGE MOLECULAR SIZES OF 128 (M TOXIN), 168 (L TOXIN) AND 198 (LL TOXIN). M TOXIN CONSISTS OF THE M TOXIN AND THE NEUROTOXIN. L TOXIN CONSISTS OF THE M TOXIN AND HA.
